

Business Network and IT Services

Global Network Tracker

The **Current Analysis Global Network Tracker** service provides a competitive database of the countries and cities where leading carriers own network PoPs, and have NNIs with other carriers in order to deliver IP/MPLS VPNs and Ethernet VPLS, and Ethernet and DSL access. The service is designed to help competitors bid more effectively on global network deals for multinational customers.

Features of the **Current Analysis Global Network Tracker** include:

Global Network Database

Using the **Global Network Tracker** database, clients can quickly find what a carrier can offer in a particular region, country or city and build up a picture of global service capabilities and where they can deliver services on-net. Updated every six months, the database includes carrier offerings in Western Europe, Eastern Europe, United States and Latin America, Middle East and Africa and Asia Pacific.

Global Network Alerts

Concise impact analysis reports alert clients whenever major competitors have expanded their network reach, upgraded their network or service capabilities in a region via their own infrastructure or NNIs.

Advisory Market Trend Reports

Published every six months, Market Trend Advisory reports provide market commentary on the global network operator market, new network expansion, partnerships and MNC bid activity, and determine competitiveness by geographical region.

Carrier Competitiveness Ratings

Analysts call out which carriers are competitive by region for MPLS, DSL, Ethernet, and VPLS services.
